Here is a shortcut method for calculating BMI (if you are too short or too tall for the table)

- Step 1) Multiply weight (in pounds) by 703
- Step 2) Multiply height (in inches) by height (in inches)
- Step 3) Divide the answer in step 1 by the answer in step 2 to get your BMI !!

Example: for a person who is 5 feet 5 inches tall weighing 149 lbs.

- Step 1)  $149 \times 703 = 104747$
- Step 2)  $65 \times 65 = 4225$
- Step 3)  $104747 \text{ divided by } 4225 = 24.8$
